(+86) 14700089360

Introduction

Yuqing Luo earned a Bachelor of Science (First Class Honours) in Computing from the University of Greenwich, UK, in 2023, and an MSc in Computing and IT Management (Distinction) from Cardiff University, UK, in 2024. His research interests include multimodality model applications, image complexity assessment, computer vision, and intelligent visual content understanding. He is currently seeking a PhD position in AI for image processing, with a particular focus on cross-modal learning and image complexity analysis.

Education

B.Sc. (Hons) Computing – First Class Honours & ranked in the top 5% of the major
Sep 2019 – Jun 2023

Xiamen University (China) & University of Greenwich, Faculty of Engineering & Science (UK)

Core course: Computer Troubleshooting-90% | Computing Project Management-90% | Computer Systems Principles90% | Routing Technology90% | Switching Technology95% | Digital Forensics85% | Network Security Concepts 95% | Advanced Networking88% | Final Project (Artificial Intelligence)74%

M.Sc. Computer Science & Technology (Computing and IT Management) – Distinction & ranked in the top 10% of the major
Sep 2023 – Dec 2024

School of Computer Science & Engineering, Cardiff University (UK)

Core course: Capstone Project (Artificial Intelligence & Image Complexity Assessment) | Cloud Computing & Distributed Systems | IT Management | Databases

Project Experience

✓ **Fire-Prevention AI System – Indoor Occupancy Counting**

Project Duration: November 2022 – June 2023

Supervisor: Professor Chaoying Ma, University of Greenwich

Project Description: This project utilizes artificial intelligence technologies (including object classification and object motion tracking) to develop an indoor crowd counting system, aimed at improving the efficiency

of crowd evacuation during fires. By monitoring and analyzing real-time changes in the number of people indoors, the system can assist firefighters and evacuation coordinators in making more timely decisions. The project was submitted as a graduation thesis to the University of Greenwich and passed with high marks.

✓ **Cross-Modal Scene Semantic Alignment for Image Complexity Assessment**

Project Duration: June 2024 – December 2024

Supervisor: Professor Wei Zhou, Cardiff University

Project Description: This project establishes the first cross-modal alignment framework in the field of image complexity assessment. It focuses on the influence of scene semantics in images (such as the number of people, colors, emotions, religion, etc.) on the human visual system. The project involves designing an image-to-text alignment model to achieve state-of-the-art image complexity prediction.

Project Outcome:

- Distinction-graded Final Year Project, School of Computer Science and Informatics, Cardiff University
 - **Y. Luo**, Y. Li, J. Liu, J. Fu, H. Amirpour, G. Yue, B. Zhao, P. Corcoran, H. Liu, W. Zhou, "Cross-Modal Scene Semantic Alignment for Image Complexity Assessment", in **British Machine Vision Conference**, 2025. (Accepted)
-

✓ **Image Complexity Assessment II – Motion-Aware ICA (MICM)**

Project Duration: January 2025 – May 2025

Supervisors: Professor Pual L. Rosin (IAPR Fellow), Professor Wei Zhou, Cardiff University

Project Description: This project establishes the first multimodal framework in the field of image complexity assessment that focuses on three modalities. Inspired by the human visual system, it leverages image-to-text and image-to-video models to explicitly mine motion cues, thereby achieving state-of-the-art image complexity prediction.

Project Outcome:

- Y. Li, X. Yang, **Y. Luo (student as secondary author)**, H. Amirpour, H. Liu, W. Zhou, "Unlocking Implicit Motion for Evaluating Image Complexity", in **Displays**, 2025, 103131, ISSN 0141-9382, <https://doi.org/10.1016/j.displa.2025.103131>.(JCR Q1)

Volunteer Experience

IEEE Conference (ICIP 2024)

In 2024, I served as a volunteer at the IEEE International Conference on Image Processing (ICIP 2024) in Abu Dhabi, assisting with attendee registration, on-site enquiries, and A/V setup for parallel sessions, while maintaining order during oral and poster presentations to keep the program running smoothly; the role sharpened my cross-cultural communication and event-coordination skills and gave me direct exposure to cutting-edge research in image processing.

Internship experience

China Mobile – Yuxi Branch, Yunnan

Network Department Intern

Jul 2022 – Aug 2022

- Monitored live network performance and tuned parameters to keep service secure and stable.
 - Catalogued and archived documentation for network hardware.
 - Assisted with endpoint security: applied patches, ran vulnerability scans and fixes, prevented malware, and resolved faults promptly.
-

China Unicom – Yuxi Branch, Yunnan

Construction & Maintenance Department Intern

Jul 2021 – Aug 2021

- Supported digital O&M for local mobile infrastructure, covering wireless access gear, core-network nodes, and auxiliary equipment.
-

Yuxi Zhonghui Electric Power Equipment Co., Ltd., Yunnan

Equipment Operator

Aug 2017 – Sep 2017

- Assembled electronic devices on the production line, completing daily build quotas.
- Gained hands-on knowledge of device design principles, operating procedures, and safety practices.
- Became familiar with manufacturing workflows and quality-control standards through practical shop-floor experience.

Skills

Languages: English (Graduated with top GPA from a UK university, holding both undergraduate and postgraduate degrees); Mandarin Chinese (native).

Technical skills: machine learning, computer vision, image processing, Python, JavaScript, MATLAB, Linux, SQLite, computer hardware, troubleshooting, basic computer security, routing, switching, advanced networking, practical networking, server administration, project development management, and requirements analysis and management.
